Education

University of California, Davis Davis, CA
B.S. in Computer Science *Expected June 2027*
Relevant Coursework: Algorithms & Data Structures, Operating Systems, Machine Learning, Artificial Intelligence, Computer Architecture

Experience

UC Davis Information & Educational Technology Davis, CA
Junior Application Developer *Jun 2026 – Present*

- Develop and maintain C#/.NET advising applications and OASIS–uAchieve integration workflows supporting UC Davis's 31,000+ undergraduate population.
- Implement and debug student-form processing, correcting academic-credit calculations and investigating submission errors affecting program changes.
- Validate application changes in test environments, review and merge pull requests, and coordinate release verification with engineers and registrar staff.
- Evaluate degree-audit code for correctness and performance; identify repeated data lookups and recommend reusing results across graduation requirements.
- Maintain advising-system documentation and convert help content into structured Markdown for ServiceNow knowledge-base migration.

ASUCD Picnic Day Davis, CA
Assistant Technical Director *Nov 2025 – Present*

- Design and develop the **Picnic Day Schedule Builder** in React/TypeScript, spanning UI design, onboarding, interactive maps, and calendar exports for an event with 70,000+ attendees.
- Migrated event-data workflows from Supabase to SQLite; built authenticated Google Sheets synchronization with automated updates and stale-record cleanup.
- Containerized the full stack with Docker Compose, enabling one-command setup for contributing developers.

Include Davis, CA
Software Engineer *Oct 2025 – Apr 2026*

- Delivered responsive React/Next.js features for the **Space and Satellite Systems** client website, translating Figma designs into reusable components for desktop and mobile.

Google Developer Student Club Davis, CA
Software Engineer *Oct 2024 – Jun 2025*

- Built a Python/Flask Slack bot with webhooks and slash commands for onboarding and scheduled announcements, saving organizers 2+ hours per week.

Projects

dltracker — Deadlock Analytics Platform | *TypeScript, Next.js, Redis, Playwright, Vitest*

- Built and deployed a full-stack analytics platform used by 1,000+ users, integrating Steam and Deadlock APIs into player profiles, leaderboards, and game statistics.
- Designed player identity resolution across 5 regional leaderboards, combining account metadata and match history to match ambiguous records to player profiles.
- Engineered Redis caching, rate limiting, and outage fallbacks to keep statistics available during cache failures; validated releases with Playwright/Vitest and GitHub Actions CI.

Spotify Hit Classifier | *Python, TensorFlow, XGBoost, scikit-learn*

- Built a hit-prediction pipeline for 32,000+ Spotify tracks; engineered artist, genre, and audio features and tuned models, achieving 80% Random Forest accuracy.

Kitch — Kitchen Management App | *Java, Spring Boot, React, JPA, H2*

- Built a Java/Spring Boot REST API and React frontend with 20+ endpoints for kitchen inventory, shopping lists, and recipes; separated backend services and persistence.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C#, C, C++, Go, SQL
Frontend: React, Next.js, Tailwind CSS, SCSS, HTML/CSS
Backend & Data: .NET Framework, ASP.NET Web Forms, Node.js, Express, Spring Boot, Flask, FastAPI, REST APIs, Prisma, PostgreSQL, SQLite, Redis, Firestore, Supabase
Cloud & Tools: AWS, Docker, GitHub Actions, CI/CD, Linux, Vercel, Sentry, ServiceNow, Playwright, Vitest, Pytest
Machine Learning: TensorFlow, PyTorch, XGBoost, scikit-learn, Pandas, NumPy
