EDUCATION

University of California, Davis

Bachelor of Science in Computer Science

Davis, CA

Expected June 2027

Relevant Coursework: Algorithms & Data Structures, Operating Systems, Machine Learning, Artificial Intelligence, Computer Architecture

EXPERIENCE

ASUCD Picnic Day

Assistant Technical Director

Davis, CA

Nov 2025 - Present

- Built React/TypeScript features for a production event platform serving 70,000+ UC Davis Picnic Day attendees.
- Implemented onboarding tutorials, calendar exports, and interactive map flows to improve event discovery and attendee navigation.
- Migrated data workflows from Supabase to embedded SQLite with authenticated Google Sheets sync, upserts, and stale-record cleanup.
- Containerized the full stack with Docker Compose, reducing local setup to one command and improving contributor onboarding.

Include

Software Engineer

Davis, CA

Oct 2025 - Apr 2026

- Shipped 3 responsive React/Next.js sections for a client website, translating Figma requirements into reusable production components.
- Built prop-driven layouts, optimized Next.js image rendering, and modular SCSS mixins to keep pages maintainable across desktop and mobile.

Google Developer Student Club

Software Engineer

Davis, CA

Oct 2024 - Jun 2025

- Built a Python/Flask Slack bot with Slack API webhooks and slash commands to automate club onboarding and announcements.
- Implemented parameter parsing and scheduled announcement workflows, saving organizers 2+ hours per week.

PROJECTS

dltracker - Deadlock Analytics Platform | Next.js 16, TypeScript, PostgreSQL, Redis, Playwright, Vitest, GitHub Actions

- Built and deployed a full-stack analytics platform used by 1,000+ users, integrating Steam and Deadlock APIs across 10 pages and 45+ reusable components.
- Designed player identity resolution for ambiguous leaderboard records across 5 regions using account metadata and match-history signals.
- Implemented Redis rate limiting, ISR caching, Zod validation, Sentry monitoring, GitHub Actions CI, and Playwright/Vitest tests for production reliability.

Spotify Hit Classifier - ML Pipeline | Python, TensorFlow, XGBoost, scikit-learn

- Built an end-to-end ML classification pipeline over 32,000+ Spotify tracks using scikit-learn, XGBoost, and TensorFlow.
- Engineered artist, genre, and audio features with GridSearchCV tuning, improving Random Forest accuracy to 80%.
- Compared regression and classification approaches, selecting binary hit prediction after feature analysis showed weak regression signal.

Kitch - Kitchen Management App | Java, Spring Boot, React, H2, JPA

- Built a full-stack kitchen management app with a Spring Boot REST API and React/Vite frontend for inventory, shopping lists, and recipes.
- Designed layered backend architecture with controllers, services, repositories, DTOs, and JPA entities across 20+ REST endpoints.

8-Bit CPU - Custom Processor | Logisim, Computer Architecture

- Designed a 5-stage pipelined 8-bit CPU with hazard detection and data forwarding, executing 20+ custom ISA instructions.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C, C++, Go, SQL

Frontend: React, Next.js, Tailwind CSS, SCSS, HTML/CSS

Backend: Node.js, Express, Spring Boot, Flask, FastAPI, REST APIs, Prisma

Data: PostgreSQL, SQLite, Redis, Firestore, Supabase

Testing/DevOps: Playwright, Vitest, Pytest, Docker, CI/CD, GitHub Actions, Linux, Sentry, Vercel

ML: TensorFlow, PyTorch, XGBoost, scikit-learn, Pandas, NumPy
